

The BC Coalition for Affordable Dependable Energy

British Columbians need to keep having affordable, dependable choices on energy to heat their homes, cook their food and run their businesses.

But recently several large BC municipalities have passed bylaws that block their residents from choosing renewable natural gas now – or hydrogen in the future.

That elimination of choice for new residential and commercial buildings means heating homes and businesses will become more expensive and less dependable for British Columbians. And it will also take away their option to have a gas stove, fireplace or barbeque.

The **BC Coalition for Affordable Dependable Energy [BC CADE]** believes that British Columbians need affordable sources of energy that meet their budgets; they need dependable energy they can count on to heat their homes and run their businesses, and they need to have a choice of energy sources. They should not be restricted to just one source – electricity – at increasingly higher prices and subject to potential shortages due to climate change.

The BC Coalition for Affordable Dependable Energy believe that British Columbians will make wise decisions that protect both their ability to heat their homes and run their businesses with dependable, affordable energy choices today and in the future – and to support the transition towards a renewable energy future.
